STAR	RWY	Routing (including Min Noise Routing)	ALTITUDES
------	-----	---------------------------------------	-----------

GETOK 1B	24	At GETOK set course 'PMV'. Leave 'PMV' on R-329 'DNV' (inbound). Passing 8DME 'DNV' turn left on track 062°M for radar vectoring onto the ILS RWY 24.	
----------	----	---	--

Comm Fail (Squawk 7600)	<p>Before GETOK. Proceed to GETOK and enter the GETOK hold. Hold at last assigned level for minimum 5 minutes, then descend to FL090 in the hold, or maintain last assigned level if below FL090. Leave GETOK on the after GETOK Communication Failure procedure.</p> <p>After GETOK. Continue on the GETOK 1B STAR. Passing 10DME 'DNV' descend to FL080. Crossing R-017 'DNV' on track 062°M, turn right direct 'DNV' and descend to 5000 FT ALT. On reaching 'DNV' complete the VOR/DME/ILS approach and land RWY 24.</p> <p>Communication Failure Procedure for STAR: In the event of a missed approach with the intention of diverting to an alternate aerodrome, proceed as follows: To the north-east, follow the routing for the VAVAN 1D SID. To the north, follow the routing for the GREYTOWN 2D SID. To the north-west, follow the routing for the EXATA 1D SID. To the west and south-west, follow the routing for the APDOG 1D SID. To the south, follow the routing for the NETIK 1D SID.</p> <p>Note 1. Whenever ATC uses terminology 'Radar vectored short ILS APCH', the interpretation should be that the glide path intercept will be below INA and resulting in a shorter final approach than normal.</p>
